| Member 3: Md. Nafees Ahommed | ID: 2111934642 |
| Member 4: Nabila Mehreen Hossain | ID: 2121271642 |

Weekly Progress Summary (Week 6):

In Week 6, our team primarily focused on resolving the technical issues faced in the previous week and making substantial frontend progress in our project.

Resolved Issues:

- **PackageDetails.jsx:** We successfully fixed the display and data flow issues that were encountered in Week 5.
- Minor bugs related to component rendering and routing have also been addressed.

Components Developed: We implemented the following React components this week:

- **MyBookings.jsx** – Displays user booking history with dynamic rendering from the backend.
- **PackageReg.jsx** – A form component that handles new user or customer package registration.
- **Navbar.jsx** – Responsive navigation bar for both admin and user sections.
- **Sidebar.jsx** – Admin panel sidebar with navigation options and route links.
- **Layout.jsx** – Structured layout wrapper to manage route-based content display.
- **Dashboard.jsx** – Administrative dashboard interface, providing access to key functionalities.

Plan for Week 7:

In the upcoming week, we plan to:

- Develop **ListPackage.jsx**, which will dynamically list all available packages.

- Build **AddPackage.jsx** to allow admins to add new travel packages into the system.
- Begin integrating our front-end structure with the database to enable dynamic content loading and data persistence.

We are progressing steadily according to the timeline and will continue integrating the frontend with backend APIs in the following weeks.
